

IT'S SIMPLE...

Freeze both ice packs (included) before initial use and before each use.

Adjust to your fit. Your Icepal® should not touch your neck but the bottom edge should rest gently against your upper back. Icepal® works better with shirts without a collar, but if you are using a collared shirt with your Icepal® just tuck it under your collar for best results.

Hold ring and pull up on front of snap to open fastener. Then clip to back of hat, centering the back of the hat. Push down on end of snap to lock into place.

Correct alignment and curve.

FREQUENTLY ASKED QUESTIONS

How long will my Icepal® provide cooling?

The initial frozen ice pack will last approximately 1 ½ hours. So realistically if you start out with the 2 icepacks frozen, you will have about 3 hours of cooling. If rotating the two icepacks in your freezer or iced down cooler, each time you rotate the icepack you will get about 45 minutes each rotation.

How do I clean my Icepal®?

With warm soapy water. We recommend you avoid putting it in the washing machine as this could damage it. You would then be very sad about your loss!

Can I use Icepal® with any hat?

Yes, but you may need to pull down the inner band on a brimmed hat or put two small slits in the back of the hat for the clips to slide through in order to attach it.

Can I use Icepal® on a motorcycle or in my car?

It is not recommended. On a motorcycle for instance your hat and Icepal® could become airborne and cause a driving hazard.

Can I use dry ice to rotate and re-freeze my Icepals®?

Absolutely not. We love our customers and wouldn't want you to get burned because dry ice is about -109 degrees fahrenheit. Can you say nasty burn?!

Who can use Icepal®?

Anyone 12 years old or older who needs relief from the heat.

Are there different sizes?

No, Icepal® is designed to adjust to fit anyone.

When doing any outdoor activity in very hot conditions always use sunblock and stay well hydrated.
